

To Whom It May Concern,

Dina Kurtalić asked me to write her a recommendation and I am happy to do so. Dina attended my courses: Object Oriented Analysis and Design and Verification and Validation Software (in progress). She passed Object Oriented Analysis and Design with the highest grade. I can freely say that I know her possibilities and potential.

During his schooling, Dina showed great initiative. Not only was she interested and motivated to learn, but she also put great work into developing her own ideas for each of the projects. She always explained her views very concisely and gave supporting arguments that were both clear and persuasive. At a personal level, she is a well-disciplined student with a pleasant personality.

Dina demonstrates reliability and honesty in establishing a relationship. She is very well motivated and a skilled student. It is my sincere hope that you will approve her application.

Please contact me if you need any additional information.

Sincerely,

Professor Dženana Đonko, Ph.D.
